

## **J2EE Software Architect**

Columbia, MD firm has immediate openings for a top-notch, highly motivated Java Software Architect. We are a small but fast-growing company that is a leading provider of software solutions for the public safety and law enforcement industry. We offer an excellent compensation package and career growth is unlimited for the right individual. Ability to obtain a US Security Clearance and a willingness to travel (up to 25%) is required. US Citizens need only apply.

This company is seeking a Java Architect to become part of the core design and development team for the next generation web version of the company's product suite. Candidate must have proven experience designing and developing enterprise software. Candidate must be a general problem solver who can understand high level architectural concepts, must be able to design solutions based on established concepts and best practices, and must be proficient at Java development. Candidate must understand the full software lifecycle and must be able to contribute at every phase. Candidate must provide leadership as a developer and be able to mentor junior developers as needed and lead code reviews. Candidate must be a motivated self-learner, work independently, and must be eager to work in a fast-paced and highly productive environment.

This position will be responsible for evaluating the existing J2EE system, reviewing existing technologies and implementations, reporting on their maintainability and scalability, and making relevant proposals for the future technical directions of the company software. The successful candidate will be responsible for continuing to maintain and extend the company J2EE application architecture and to lead the development of new J2EE applications. This candidate has primary responsibility for designing the end-to-end architecture of component-based, services-oriented applications developed in Java technology/J2EE. This is a multi-disciplinary technical role which requires strong object-oriented design skills and system design skills, Web application architecture and presentation framework skills, J2EE and Java technology architecture, Web services, XML and knowledge of Web application security.

### **Required Skills:**

- Enterprise application/systems development (8+ years)
- J2EE development (6+ years)
- JSP/Servlet development (6+ years)
- Struts Framework (3 years)
- EJB (3+ years)
- Service Oriented Architectures and Web services (2+ years)
- JBoss or WebLogic (2 years)
- Development experience with Oracle 9i/10g (5 years)
- Experience with PL/SQL stored procedures
- Experience designing Object Oriented systems and modeling with UML
- Experience with either JBuilder or Eclipse
- Experience with unit testing frameworks such as JUnit
- Experience with Hibernate is a plus

### **Qualifications:**

- BS/BA in computer science or computer engineering required
- MS Degree highly desired
- Excellent verbal and written communication skills
- Strong problem solving skills
- Desire to be part of a highly productive, fast-paced team
- Organized and detail-oriented personality

Salary is commensurate with qualifications and experience.
