

## **Senior Level Quality Assurance Engineer**

Columbia, MD firm has immediate openings for top-notch, highly motivated entry-level to senior-level QA engineers. We are a small but fast-growing company that is a leading provider of software solutions for the public safety and law enforcement industry. We offer an excellent compensation package and career growth is unlimited for the right individuals. US Citizens need only apply.

### Responsibilities:

- Develop and execute thorough test plans in a timely and efficient manner for all areas of the product
- Write easy-to-understand test case steps and expected result descriptions
- Develop and implement quality assurance standards, processes, and controls
- May assist in developing quality assurance policies and procedures
- Trouble-shoot problems identified, and communicate results through the issue tracking system
- Ability to perform tests against client-server and Web applications, both front-end UI as well as back-end Databases and Application Servers under multiple operating systems (Unix and/or Windows based)
- Implement performance test using a unit-testing framework
- Review and Analyze Functional Specifications and/or related documentation for the software product
- Work closely with developers to discuss features and test strategies (as well as defects, resolutions, and project plans / activities)
- Evaluate production capabilities and recommend improvements
- Communicate with customers and translate requirements into specifications, bugs, and software solutions
- Critically think about how end-users will interact with the software being tested and turn those thoughts into finding bugs, listing action items, and opening avenues of discussion
- Continually research new and emerging technologies and incorporate that new knowledge into your ongoing QA process

### Qualifications:

- BS/BA in computer science or computer engineering required
- Must have 2-4+ years previous QA experience
- Knowledge of software QA processes and methodologies
- Possesses general understanding in the areas of application programming, database and system design
- Understands web-based and client/server architectures
- Genuine enjoyment of software QA work
- Excellent verbal and written communication skills
- Strong problem solving skills
- Desire to be part of a highly productive, fast-paced team
- Organized and detail-oriented personality

### Ideal:

- Experience creating automated test scripts using test tools
- Experience with programming of one or more of the following: Delphi, C#, .Net, Java, J2EE
- Ability to write PL/SQL queries and analyze Oracle databases
- Ability to trouble shoot software installations and application servers (JBoss, WebLogic)
- Understanding of most concepts, practices, and procedures of the public safety and law enforcement industry

Salary is commensurate with qualifications and experience.
